SUMMARY

Staff-level Engineering Leader with 6+ years of experience architecting large-scale distributed systems, AI platforms, and developer infrastructure used by millions globally. Currently lead a 15-engineer cross-functional organization building the world's first Large Pricing Model (LPM) at ZZAZZ, enabling AI-driven monetization at internet scale. Proven track record of scaling platforms to 100M+ users, processing \$1B+ monthly transactions, and influencing technical strategy across fintech, AI innovation, and developer ecosystems. Recognized 3× GitHub Star for global open-source leadership and industry impact.

TECHNICAL SKILLS

Programming Languages	Go, TypeScript, JavaScript, C++, Rust
Backend & Platform Technologies	Node.js, NestJS, GraphQL, REST APIs, API Platform Design
Data & Streaming Technologies	Kafka, Redpanda, PostgreSQL, MongoDB, Redis, MySQL, Real-Time Data Pipelines
System Design & Architecture	Distributed Systems, Event-Driven Architecture, Microservices, Platform Engineering, High-Scale System Design
AI & Modern Engineering	LLM Orchestration, Large Pricing Models (LPM), AI Automation Pipelines, Low-Latency Inference Systems
Observability & Reliability	Grafana, Kibana, New Relic, SLO/SLA Design, Performance Optimization, Incident Management
Cloud & Infrastructure	AWS, Kubernetes, Docker, Cloud-Native Architectures, Cloudflare (Workers, R2), CI/CD (GitHub Actions, GitLab CI)
Technical Leadership	Architecture Strategy, Cross-Team Influence, Hiring & Mentorship, Engineering Culture, Roadmap Planning

EXPERIENCE

Technical Lead / Staff Software Engineer

Mar 2025 – Present

ZZAZZ (AI-powered Information Pricing Platform)

Bengaluru, India

- Owned architecture of an AI-driven monetization platform, scaling infrastructure from **_5M to _100M DAU** while improving reliability through distributed caching, rate limiting, and observability enhancements.
- Led end-to-end design and implementation of **TimePay AdExchange infrastructure**, building mediation layers integrating DSPs/SSPs, ad servers, reporting pipelines, and delivery orchestration to enable real-time ad-based content unlocks.
- Architected and built the platform's **billing, wallet, and ledger systems**, implementing usage metering, entitlement tracking, financial reconciliation workflows, and scalable transaction processing.
- Designed backend systems powering **Terminal AI Agent platform**, enabling developers to build AI agents using LLMs of their choice; implemented orchestration workflows, tool integrations, and scalable execution pipelines.
- Defined technical direction across platform, backend, and data systems, influencing architecture for pricing engines, large-scale web crawlers, analytics pipelines, and developer-facing API platforms.
- Architected and built the **QMV Public API platform**, enabling developers to programmatically price text, audio, and video content with API versioning, authentication, rate limiting, and usage metering.
- Designed core monetization infrastructure including pricing models, entitlements, billing workflows, and analytics pipelines, translating business strategy into scalable technical systems.
- Led development of event-driven lifecycle orchestration using Kafka to manage publisher onboarding workflows across distributed microservices.
- Built foundational platform services hands-on, including a multi-channel Notification Service with templating, retries, DLQs, and audit logging.
- Improved platform scalability by optimizing data pipelines, caching layers, and distributed coordination patterns to support exponential growth in traffic and data volume.
- Influenced engineering standards by introducing architecture reviews, design RFCs, testing strategies, SLO-driven operations, and incident response practices.
- Partnered with AI and data teams to productionize ML-based pricing models into low-latency inference workflows with caching and fallback strategies.
- Mentored engineers and provided technical leadership across teams, guiding system design and architectural decision-

making.

Senior Software Engineer

Aug 2023 – Feb 2025

Novo (Core Banking Platform)

Bengaluru, India

- Revamped banking self-service request engine, reducing manual decisioning from **99% to 1%** while improving operational efficiency.
- Designed and built a scalable NACHA processor powering ACH money movement exceeding **\$1B monthly GTV** with high reliability.
- Built a centralized microservice supporting ACH, Wire, and card payment workflows, enabling scalable fund transfer orchestration.
- Developed an intelligent company-name matching algorithm achieving **98+% accuracy** for automated stop-payment processing.
- Enhanced observability by standardizing health-check frameworks and improving monitoring dashboards across services.

Software Engineer II

May 2021 – Jul 2023

Postman (API Ecosystem Team)

Bengaluru, India

- Led backend development for API Repository integrations, enabling large-scale Git service authentication and API lifecycle management.
- Designed scalable APIs for AWS API Gateway, Apigee, and Azure integrations used by **20M+ developers**.
- Built data ingestion pipelines for API governance and monitoring, integrating observability tools.
- Implemented feature flagging and rollout strategies for risk-free deployments across large user bases.

Software Engineer

Jun 2019 – Apr 2021

Postman (Integrations Team)

Bengaluru, India

- Built major integrations including AWS API Gateway deployments and Datadog monitoring workflows.
- Developed HTTPS proxy support for capturing live API traffic into Postman collections.
- Implemented multi-language code generation tools improving developer productivity.

EDUCATION

B.Tech – Information Technology

2015 – 2019

VIT University, Vellore

CGPA: 8.88/10

ACHIEVEMENTS

- Recognized globally as a **3× GitHub Star**, awarded among top developers worldwide for sustained open-source leadership and ecosystem impact.
- Mentored **300+ developers** through Google Summer of Code, technical workshops, and community programs, helping engineers successfully launch open-source careers.
- Built and maintained **widely adopted developer tools** and open-source platforms used by thousands of engineers across the global developer community.
- Authored “**Digital Footprint for Software Engineers**”, a practical career guide on leveraging technical visibility and online presence for professional growth.
